**BRUX-EZE® &  
REM-E-DEZE®  
BRUXISM SPLINTS**

These splints relieve patients' stress and bruxism. By offering them to your doctors, you're helping them protect their patients' investment in crowns, cosmetics and other restorative work – all while adding value and profit to your lab.

Brux-eze® is constructed of heat-cured elasticized acrylic. Rem-e-deze® is a hybrid splint made of a heat-cured acrylic material for heavy bruxers. In addition, Dental Services Group can also fabricate the TAP™ and PM Positioner™ sleep appliance from the same material.
